

SEA★LIFE

Sally the Seahorse
and the
Missing Coral

Once upon a time, in a beautiful coral reef in the ocean, there lived a happy little seahorse named Sally.

The illustration depicts a rich underwater ecosystem. In the upper portion, a pink seahorse is positioned on the left, and a red seahorse is on the right, both swimming near green and orange branching corals. The middle section features a large purple seahorse with a pink and orange striped body, facing right, and a yellow seahorse with a red tail, facing left. The lower section shows an orange seahorse on the left and a pink seahorse on the right, surrounded by diverse coral structures including purple branching corals, green leafy plants, and pink and grey rounded coral formations. The background is a gradient of green and blue, with small white bubbles scattered throughout.

**Sally loved to swim among
the colourful corals and play
with her seahorse friends.**

One day, Sally noticed that something was wrong with the reef. The coral she loved so much was disappearing, and her seahorse friends were disappearing too. Sally knew she had to do something to save her home.

Sally set out on a mission to find out what was happening to the coral. She swam through the reef, asking her friends and other sea creatures for help. They told her that the coral was being damaged by pollution and climate change.

Determined to save the reef, Sally decided to take action. She rallied her seahorse friends and worked with other sea creatures to clean up the pollution and protect the remaining coral. They also planted new coral to help it grow back.

Thanks to Sally's efforts, the coral reef was saved, and the seahorses and other sea creatures were able to thrive once again. Sally became a hero among her friends and was known as the seahorse who saved the reef.

The End

Note for reader- You too can just be like Sally the seahorse and save the ocean! Visit SEA LIFE Trust website www.sealifetrust.org/en/ to find out how you can save our ocean in your local area!
